Configurable distances and modes

Right combination of different communication distances with selected access modes ensures that only a right person will always be able to open a door

Communication ranges: short (turnstiles), middle (offices), long (parking lots, gates)

Access modes: Tap in app mode that can be combined with double identification

Security makes differences

Thanks to **Bluetooth v4** and **encrypted communication** between Bluetooth module
and 2N® Mobile Key app it's ensured that
nobody will hack the communication and
misuse your credentials.

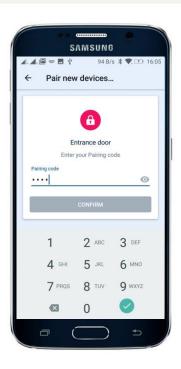

It is not only about SW security where we offer also **802.1X authentication**, but also about HW security – therefore the unit is equipped with **tamper switch**.

Simple pairing process

- Pair your smartphone with 2N® Access Unit Bluetooth in three simple steps:
 - Download 2N[®] Mobile Key app to your smartphone (Google Play or AppStore)
 - Ask the administrator for pairing PIN code
 - Get closer to 2N® Access Unit Bluetooth and enter pairing code into the app

Use 2N® Access Commander to pair with more units from one place

Smartphone is your key

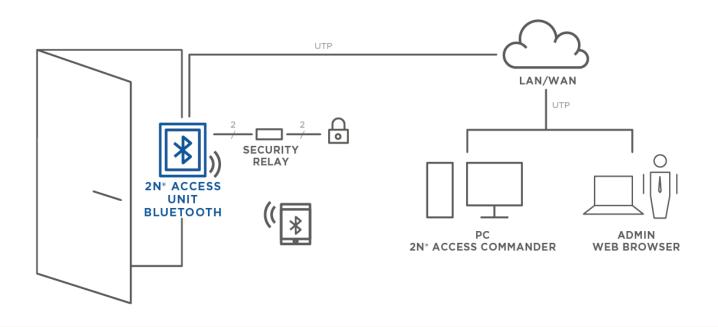

Have you ever forgotten your RFID card at home? Did you return back for it?

What would you do if you leave your phone at home?

Smartphone is a natural part of our daily life so why not to use it for door control. It also eliminates the risk of card duplication!
